

Ecosystems

Contents

<i>Preview the Book</i>	2
What Is an Ecosystem?	3
Parts of an Ecosystem	4
Ecosystems Around the World	6
<i>Main Idea and Details</i>	8
How Do Parts of an Ecosystem Interact?	9
Needs of Living Things	10
Producers, Consumers, and Decomposers	11
Symbiosis	14
Competition	15
<i>How to Read Diagrams</i>	16
How Do Energy and Matter Move Through Ecosystems?	17
Energy in Ecosystems	18
Food Chains	18
Food Webs	20
Energy Pyramids	22
Matter in Ecosystems	23
Glossary	24

Glossary

abiotic (ay-bye-AH-tik) nonliving (4)

biotic (bye-AH-tik) living (4)

carnivore (KAHR-nuh-vor) a consumer that eats only animals (12)

community (kuh-MYOO-nuh-tee) all the different populations of organisms living together in one place (5)

competition (kom-puh-TISH-uhn) the struggle among living things that share the same resources such as sources of food, water, or shelter (15)

consumer (kuhn-SOO-mur) a living thing that cannot make its own food and must get energy by eating other living things; animals are consumers (12)

decomposer (dee-kuhm-POH-zur) a living thing that gets energy by breaking down the remains of dead plants and animals; fungi (such as mushrooms), bacteria, and some animals (such as insects and earthworms) are decomposers (13)

diversity (duh-VUR-suh-tee) variety (5)

ecologist (ee-KAH-luh-jist) a scientist who studies ecosystems (18)

ecosystem (EE-koh-sis-tuhm) all the living and nonliving things in one place and all their interactions; examples are grassland, desert, rain forest, and freshwater ecosystems (4)

energy pyramid (EN-ur-jee PIR-uh-mid) a diagram that shows the amount of energy moving through a food chain (22)

environment (en-VYE-ruhn-muhnt) all the physical things and conditions, such as soil, air, climate, plants, and animals, that surround a living thing (4)

food chain (FOOD CHAYN) a series of organisms that depend on one another for food; energy is passed from one organism to another in a food chain (18)

food web (FOOD WEB) the connected food chains in a community (20)

habitat (HAB-i-tat) the place in nature that is home to a living thing (10)

herbivore (HUR-buh-vor) a consumer that eats only plants (12)

niche (NICH) the role of a living thing in its habitat; includes where an organism lives, what it eats or takes in from its surroundings, and how it affects the other living and nonliving things in its habitat (21)

omnivore (OM-nuh-vor) a consumer that eats both plants and animals (12)

organism (OR-guh-niz-uhm) a living thing such as a plant or an animal (4)

photosynthesis (foh-toh-SIN-thuh-sis) the process by which a producer such as a plant makes its own food (11)

population (pop-yuh-LAY-shuhn) all the members of one species living in a place (5)

predator (PRED-uh-tur) an animal that hunts and eats other animals (12)

prey (PRAY) an animal that is hunted and eaten by a predator (12)

producer (pruh-DOO-sur) a living thing that makes its own food and serves as food for consumers; most plants are producers (11)

scavenger (SKAV-uhn-jur) a consumer that eats animals that are already dead (12)

species (SPEE-sheez) a group made up of all the living things of the same kind; mallard ducks and great blue herons are two different species of birds (5)

symbiosis (sim-bye-OH-sis) a relationship between two living things of different species that helps at least one of them meet its needs (14)

system (SIS-tuhm) a group of parts that work together, forming a whole (5)
