Lesson 6

Comparing Fractions Using Common Denominators

- **Write equivalent fractions for the fractions in each pair so that the new fractions have the same denominator.**
- **Answer the questions.**

1

$\frac{4}{6} = \frac{\square}{\square}$

$\frac{3}{4} = \frac{\square}{\square}$

Which fraction is greater?

2

$\frac{5}{9} = \frac{\square}{\square}$

$\frac{16}{18} = \frac{\square}{\square}$

What is their difference?

3

$\frac{1}{2} = \frac{\square}{\square}$

$\frac{2}{3} = \frac{\square}{\square}$

What is their sum?

4

$\frac{3}{7} = \frac{\square}{\square}$

$\frac{4}{9} = \frac{\square}{\square}$

Which fraction is greater?

5

$\frac{5}{8} = \frac{\square}{\square}$

$\frac{2}{3} = \frac{\square}{\square}$

What is their difference?

6

$\frac{1}{3} = \frac{\square}{\square}$

$\frac{4}{5} = \frac{\square}{\square}$

What is their sum?
